Business Classification:

Large

Zone Presence:

Approved in all zones

Technical Capability:

Northrop Grumman has a well-earned, worldwide reputation for outstanding performance on defense programs. In January 2003, *Forbes* ranked us as the "Company of the Year." In *Business Week's* spring 2003 ranking of Fifty Best Performers, Northrop Grumman was one of only two defense firms listed. As a principal services contractor to NAVSEA and its field activities, we are recognized for cost efficiency in delivering quality products; effective management of large diverse subcontracting teams; and outstanding expertise in systems engineering, test and evaluation (T&E), installation and/or technical support, and system and/or equipment configuration management (CM) support. Northrop Grumman's technical approach includes the following key components:

We offer a technically diverse and experienced team with proven success on NAVSEA warfare center contracts.

Our team has national reach and perspective yet maintains a true local focus. We currently hold prime contracts and maintain offices in all seven zones.

Our proposal cites the qualifications and experience of 142 named employees. These individuals represent less than 1.5 percent of the total number of professionals our team currently has under contract supporting numerous technical efforts for NAVSEA warfare centers. These 9,800 individuals represent a small percentage of the total employees on the larger Northrop Grumman team. Such impressive numbers afford our team exceptional reach-back capability across the country.

Northrop Grumman has a quality-focused management culture based on employee commitment to quality and adherence to certified and proven processes. We will apply this philosophy to the Seaport Enhanced contract, including the use of methodologies such as Capability Maturity Model Integration (CMMI) Level 5, International Standards Organization (ISO) 9001:2000, and Six Sigma.

The professionalism of our people, the rigor of our management approach, and the relevant experience of our technical and management leadership will ensure the Northrop Grumman team is

consistently able to deliver the highest quality technical solutions and innovations across NAVSEA warfare centers.

Taskings:

- 3.1 R&D Support
- 3.2 Engineering Support
- 3.3 Modeling
- 3.4 Prototyping
- 3.5 System Design Documentation / Tech Data Support
